Involute~~

Flat-root, major diameter fit: this type of splined shaft has a tightly controlled outside diameter (male) and major (female) diameter. Fillet-root, side-fit: This type of splined shaft promotes a full radius in the trochoid area between the teeth on both the male and female members. This full radius is tangent to the involute sides of adjacent teeth, providing maximum strength and durability.

(continued)

WN4 calculates dimensions, tolerances, dimension over pins, stress and life expectation for Involute Splines according to ANSI B92.1 and ANSI B92.1b. Basically, WN4 uses imperial units inch, psi, lb-in. Metric units can be configured as well. WN4 calculates the fit types "Flat Root Side Fit", "Fillet Root Side Fit" and "Major Diameter Side Fit". Pressure angle can be 30 ° , 37,5 ° or 45 ° .

WN4 - Involute Splines

Side-fit involute splines may have a flat-root or fillet-root form. A flat-root ramp on the hob tooth profile will

## Where To Download Flat Root Side Fit Involute Spline Dp 30 Pa Continued

generate a chamfer on the tooth to provide clearance at the major diameter between the external and internal mating teeth. A fillet-root spline hob has a smooth radius so as not to generate a hard chamfer on the spline teeth tips.

### Spline Cutting - Helios Gear Products

Engineering Design Exceptions: a) The external major diameter, unless chamfered or reduced, may interfere with the internal form diameter on flat root side fit splines. Internal splines made to the 1957 and 1960 standards had the same dimensions as shown for the major diameter fit splines in this standard.

Involute Spline Engineering Drawing Data | Engineers Edge ...

A side-fit spline has clearance between the root diameter of the external part and the inside diameter of the internal part. Also, there is clearance between the outside diameter of the external part and the major diameter of the internal part. The fit for a side-fit spline is the difference between the circular-tooth thickness of the external splined part and the circular-space width of the internal part.

speeds. That necessitates more precise centering and reduced runout. In practice, these fits are rarely used. Side fit splines with involute flanks are in the majority and offer the biggest range of use. Diameter fit. Both torque transmission and centering are

Involute Splines - Sep/Oct 1990 Gear Technology  
Side fit splined couplings are widely used in all industries including automotive and aerospace. The main feature of this type of coupling is its self-centering ability under load. Although not as precise as the major diameter fit spline, this type of coupling serves successfully in a wide variety of applications.

Major diameter fit vs. side fit splines - Involute Internal & External Involute Splines – Renown Gears. Internal & External Involute Splines. The sides of an internal and external involute spline are equally-spaced teeth and the curve on the tooth flank is involute. The curves increase the strength by decreasing stress concentrations. There are many different standards in both metric and imperial also including fillet root side fitting, flat root side fitting and major diameter and side fitting.

edition. The book is a detailed, practical guide and reference to gear technology. The design of all types of gears is covered, from those for small mechanisms to large industrial applications. The presentation is designed for easy reference for those involved in practical gear design, manufacture, applications and problem solving. The text is well illustrated with clear diagrams and photographs. The many tables provide needed reference data in convenient form.
