Introduction to Renewable Energy | Taylor & Francis Group

One of the most intriguing concepts of renewable energy, and one being used in the US today, is harnessing heat from under the surface of the planet produced as a result of geological processes such as natural heat loss, volcanic activity, or from perfectly normal and safe processes such as radioactive decay (39). We have used the heat of the Earth for centuries; hot springs all over the world have been places of spiritual significance and centers of settlement.
