Lab Manual Spring 2007 - OpenCourseWare

The vertebrate skeleton General characteristics. In vertebrates the adult skeleton is usually formed of bone or cartilage—living substances that grow with the animal, in contrast to the many types of invertebrate skeleton that do not grow or are dead secretions, deposits, or crystals. The internal position of bones and their central position in limbs provide firm support for small and large animals.

Skeleton - The vertebrate skeleton | Britannica
skeletons. Problem How can skeletal evidence be used to help classify primates? Pre-Lab Discussion Read the entire investigation. Then, work with a partner to answer the following questions. 1. How will you compare primates in this investigation? 2. How will you find the area of the lower jaw for each primate? 3.
