The Common Gateway Interface (CGI) is a standard for enabling applications (commonly called CGI programs or CGI scripts) to interact with Web servers and (indirectly) with clients (e.g., Web browsers). CGI is often used to generate dynamic Web content using client input, databases and other information services.

~~Web Programming with CGI~~

In computing, Common Gateway Interface is an interface specification for web servers to execute programs like console applications running on a server that generates web pages dynamically. Such programs are known as CGI scripts or simply as CGIs. The specifics of how the script is executed by the server are determined by the server. In the common case, a CGI script executes at the time a request is made and generates HTML. In brief, an HTTP GET or POST request from the client may send HTML form

~~Common Gateway Interface - Wikipedia~~

The Common Gateway Interface, or CGI, is a set of standards that define how information is exchanged between the web server and a custom script. The CGI specs are currently maintained by the NCSA.
